

The Study of Plant Life For Young People

By Marie Carmichael Stopes

RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 46 pages. Dimensions: 9.7in. x 7.4in. x 0.1in. This historic book may have numerous typos and missing text. Purchasers can usually download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1906 edition. Excerpt: . . . seeds in them. But, just as we found that some garden flowers are grown only for their beauty, and do not set any seed, so we find that some fruits are grown specially without any seeds, such as bananas and some oranges. Such fruits are the result of our liking to eat the soft, sweet pulp without the trouble of the seeds, but such fruits are of no use to the plant. Now let us look at the structure of the ripe seeds Fig. 88. Strawberry. Each of the little seeds is a whole fruit, and the flesh the swollen receptacle. Fig. 89. (A) black A, outside of Bean scar showing where the bean was attached to the pod; (r) ridge made by young root; B, bean split open; (l) nurse leaves; (l) baby plant; (a) scar where the baby plant was separated from...
